We manufacture Slotted Angles as per the requirements of the clients. These Slotted Angles are made up of fine and top quality steel and other metals. We manufacture these Slotted Angles in such a way, so that they can give long lasting usage. The Slotted Angles we manufacture are available in all sizes and ranges with the facility of customization. Slotted Angles are well designed to suit the needs of offices, departmental stores and others.

Shelves are easily adjusted to suit your needs as stock items change.

Palletise Storage System

Palletise Storage System

Selective pallet racking is the solution when it is necessary to store a wide variety of articles in pallets. Selective pallet racking allows direct access to all stored pallets without moving other pallets. It also allow storage flexibility in terms of weight and volume. Adjustable pallet racking systems come in all sorts of configurations, but the importance of getting the basics right is fundamental. For safe and efficient operation, racking systems must be designed to fit and function with both the handling equipment and the load.

Pallet levels are easily adjusted to suit your needs as stock items change.

Drive in Racking System

Drive-in racking provides greater storage density and live storage systems can offer excellent selectivity.

Multi-tier Storage & Mezzanine Floor System

Mezzanine floor is the fast and convenient way to gain extra floor space. Mezzanine floors provides the advantages of creating additional space within the structure of a new or existing building without the cost and inconvenience of moving and relocating premises. All mezzanine floors are designed to comply with current Building Regulations.

A simple storage platform can release ground floor space for production or further storage. The lower and upper floor areas could be partitioned for offices or mesh security enclosures.

Multiple-tier systems can be constructed to provide as many levels as the building height allows.

We also offer a range of accessories which will allow you to adapt your floor to suit your needs. These include pallet gates, cat ladders, staircases, mezzanine conveyors, hand and knee rails, etc.

Our floors are designed to provide the most cost effective layout required for each individual project, we would be pleased to discuss your requirements or provide any further information as required.

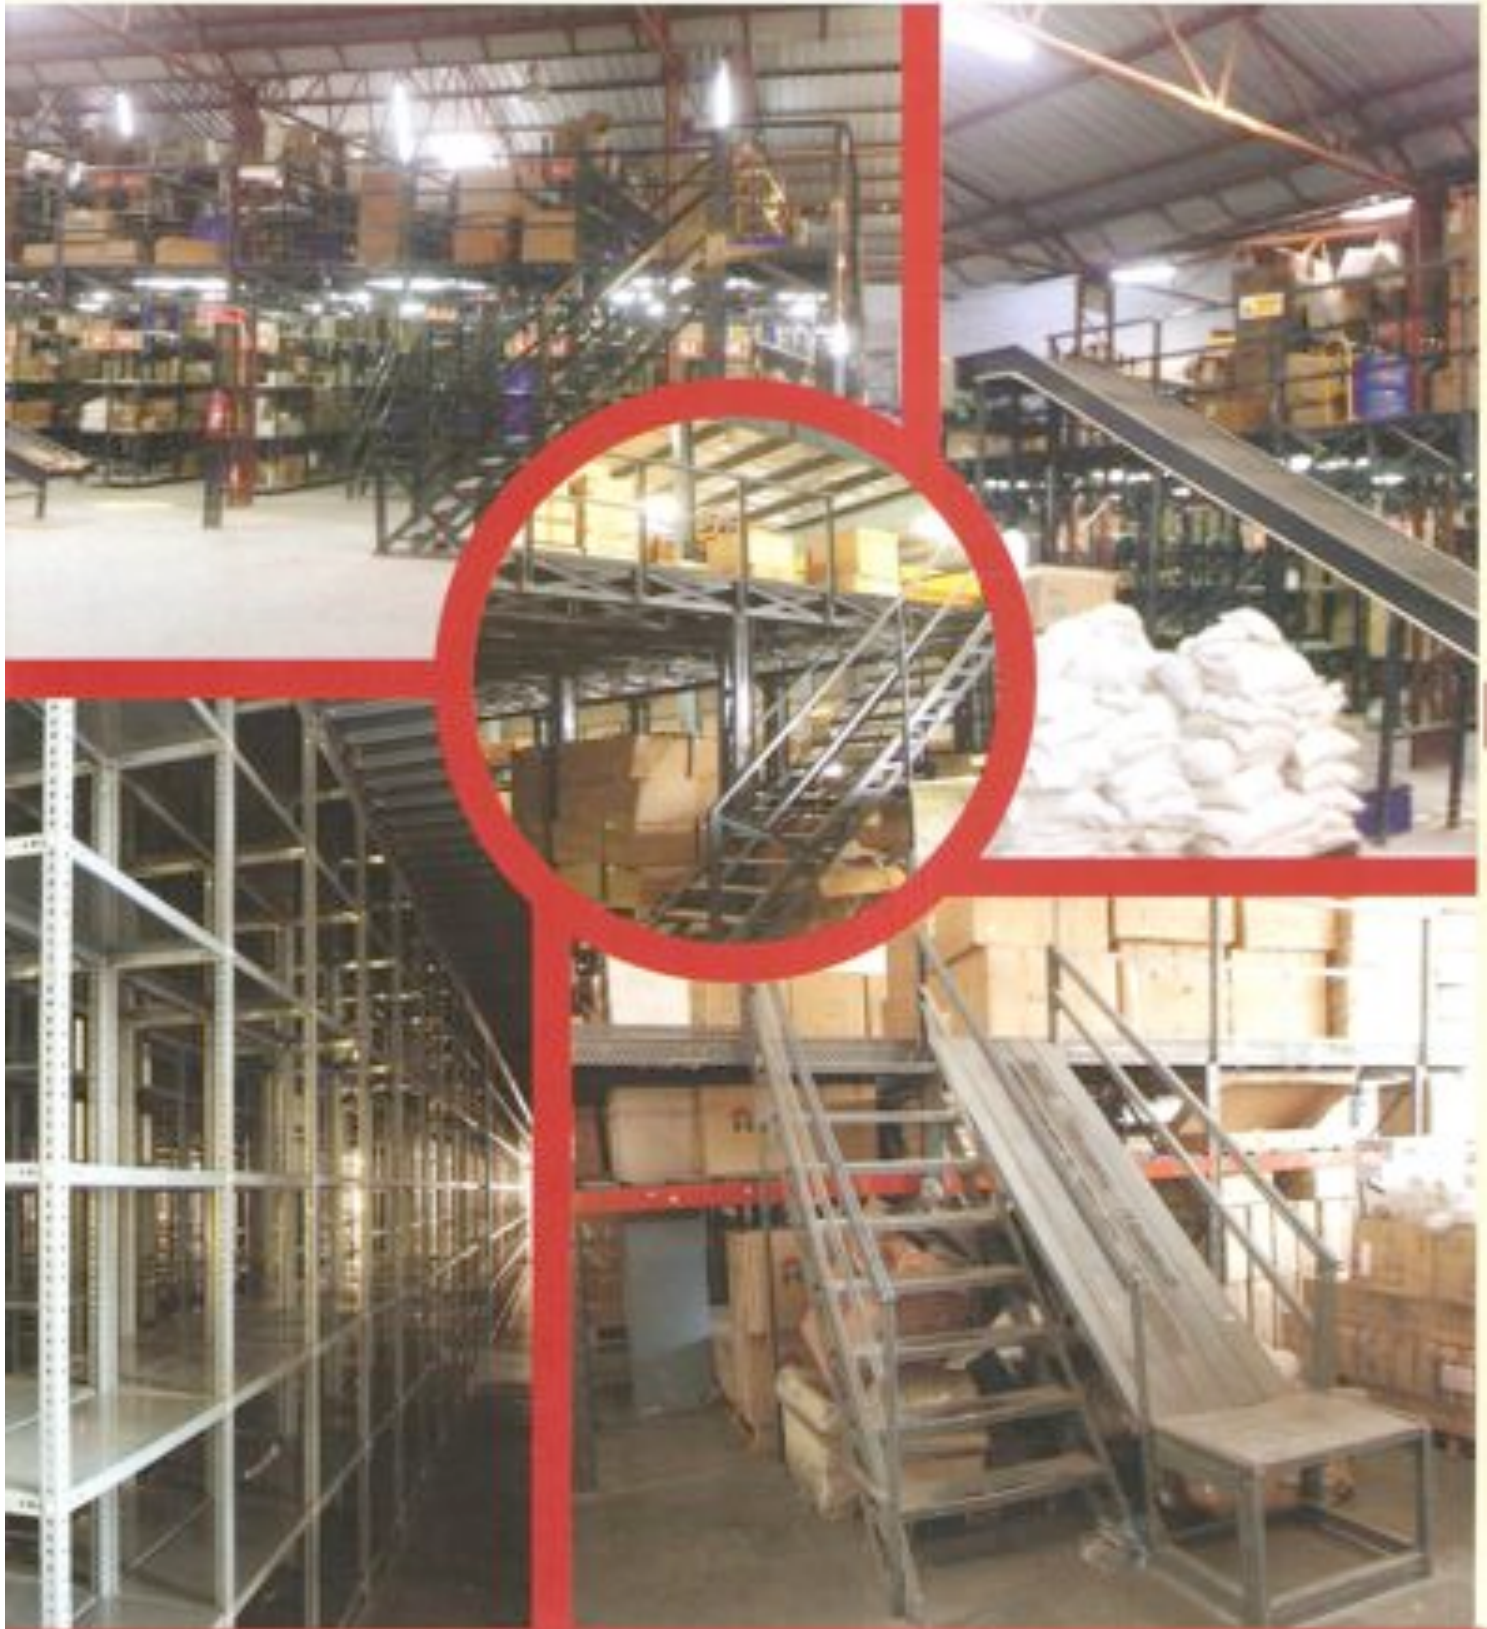

Long Shelving System

Hand loaded shelving systems can fulfill a multitude of needs, from a small storeroom to a high bay warehouse. Open frame long-span shelving can be used for bulky and heavy storage of fitted with shelf bins or dividers for smaller items. Closed systems include sheet steel backs and sides and can be easily divided for small parts storage.

Our long-span shelving system offers a full range of beam sizes and load capacities that are easily adjustable in sturdy upright frames. Available with clipboard decking or galvanized steel shelf panels.

Cable Tray

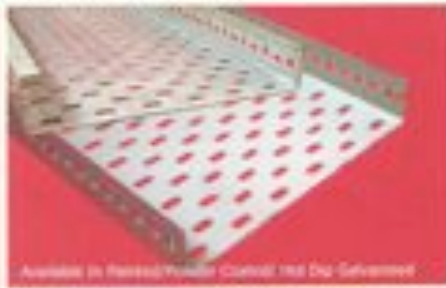

CABLE TRAY & RACEWAY (PAINTED & HOT DIP GALVANISED)

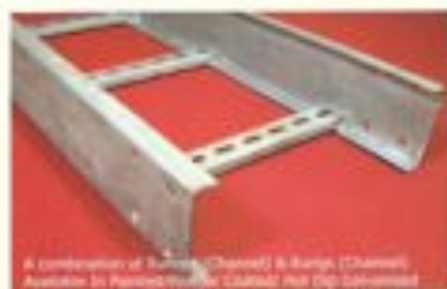

Raceway

Horizontal Bend

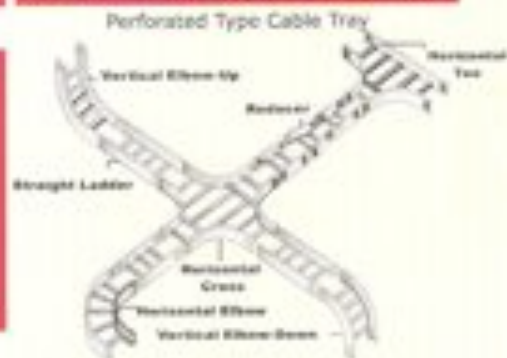

Available in Perforated/Powder Coated Hot Dip Galvanized

Ladder Type Cable Tray

Vertical Bend

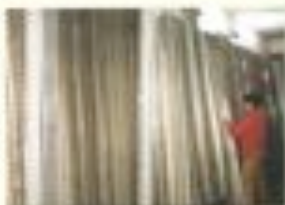

LADDER TYPE TEE, BEND & CROSS

Ladder Type Cable Tray

We offer strength and high capacity and thus are well suited to heavy duty power distribution in industrial facilities. Ladder, however, do not offer either wire and cable management flexibility of perforated type cable tray, since cable must be pulled rather than laid in place.

Perforated Type Cable Tray

It offer an effective way to manage wiring while keeping it accessible, organized and secure. These systems accommodates large no. of branch lines and offer high load-bearing capacity. Technician can install one or more dividers to separate power and data lines and organize cabling. For added cabling protection, perforated cable tray can be specified with or without covers. Ventilated louvers can also be specified to facilitate cooling by natural convection while keeping conductors enclosed and protected. Perforated cable tray may be hung using either a center rod support, C-hanger, or two hanger trapeze configuration and they can also be well mounted using brackets.

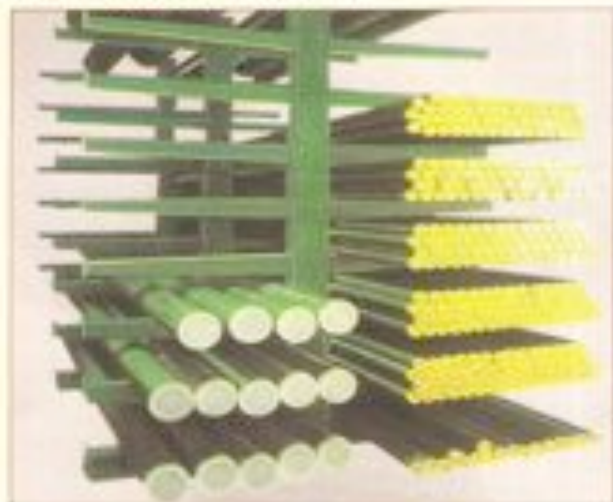

Available in different sizes and specification (Painted or Hot Dip Galvanized or Powder Coated). And also made to order.

Cantilever Rack

Cantilever racking is designed for the storage of long items. It is the perfect solution for bars, tubes, profiles and sheet materials. It is used extensively throughout the metals, timber and plastics industries. Often used with side-loading forklifts in narrow aisle configurations, it can also be fitted with product retaining trays or with beams to provide continuous uninterrupted storage.

It features tapered columns and arms, providing strength where it is needed most and providing greater clearance for easy access. The rectangular locking pin allows quick and precise arm adjustment.

Plastic Stackable Bins

The comprehensive range of storage bins provides a versatile, modern storage and handling solutions for all kinds of small items. These bins can be stacked one on top of another or hung from a range of panels to give easy access and effective use of storage space. Plastic Drawers are similar to table drawers fitted in Slotted Angle Racks. These bins and drawers are made from best quality suitable for with standing the load and pressure of stored material. Available in attractive colors viz. red, blue, green etc. and in four different sizes. Large quantity material can be store in a small space utilizing these bins. Washable and no maintenance cost involved.

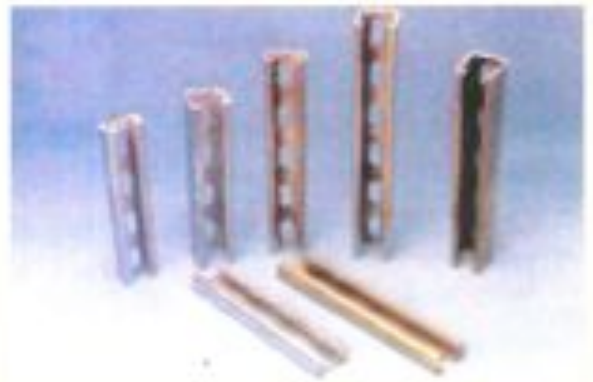

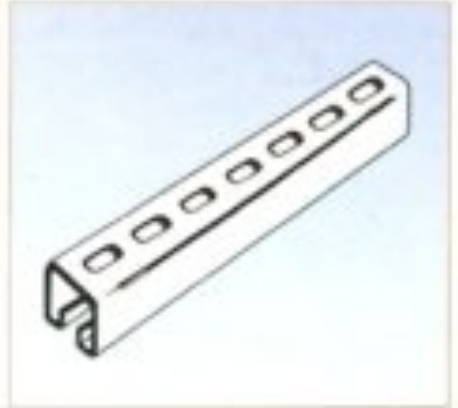

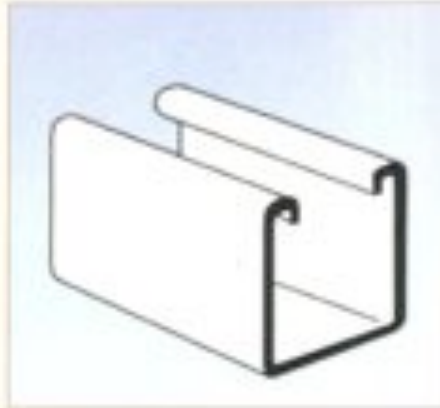

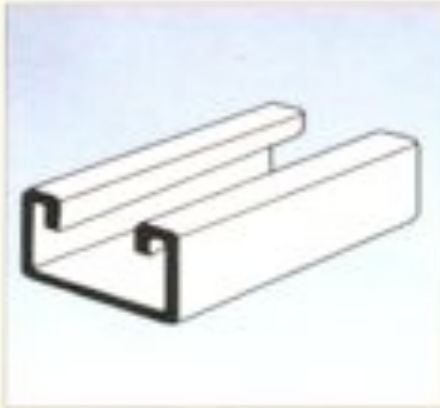

Steel bins are also available

Strut Channel

Adequate Strut Channel developed for the electrical contracting market. Our system includes many sections and sizes, which gives more flexibility. We use steel & aluminum to manufacture strut channel that is available in market & known as steel strut channel. These are helpful in supporting conduit, panel boxes, raceway systems and electrical components. It can be used as a wiring raceway. Adequate Strut Channel can be attached to ceilings, wood or steel beams. It helps in proper alignment over long spans. As a raceway system, channel offers an opportunity to reduce construction costs through more efficient use of installation labor. The versatility of channel gives contractors more flexibility in solving miscellaneous problems that may arise at the job site.

Available in various sizes and gauges (thicknesses). Painted or unpainted or hot galvanized as per requirements.

Compactors

Mobile shelving makes the best use of limited storage space. Shelving is mounted on mobile bases which move along a floor mounted track. In this way conventional shelving system can be reduced in area, closing up adjacent runs and creating an aisle only when it is needed. Consequently, more runs of shelving can be fitted into the available space. Mobile shelving can be moved manually, with a mechanical drive via

a hand-wheel, or electrically. Compared to static shelving, mobile shelving systems can double the storage capacity or, alternatively, save up to half of the floor space occupied by the equivalent quantity of static bays.

ABOUT US

Welcome to the staggering world of Adequate Steel Fabricators. A highly dexterous firm was emerged with a strong vision to become one of the dynamic & leading manufacturers and exporters across the world for the full range of Storage systems. Products manufactured by us are invincible & astonishing to our competitors. For a long time, we have been recognized as a paramount service provider rendering quintessential services to the number of clients.

Since our inception i.e. in 1967, we have been renowned for our multifaceted features & for producing most excellent products of different varieties and sizes. Our products are being appreciated even in international market due to its long-lasting & impeccable qualities. Highly sophisticated equipments & latest technology works efficiently to make the products faultless.

As one of the old & most acclaimed firms, we balance & deal every aspect of our firm to retain the reputation as it is. Apart from manufacturing & exporting most qualitative products, we give priority to our existing & upcoming customers. Utmost satisfaction of the customer is a real asset of Adequate Steel Fabricators.

To provide qualitative & versatile products to our clients, we use advance technology with efficient professional manpower. Last but not the least, we offer our products with excellent delivery service at rock bottom price.

- + WE ALSO DO CUSTOMER'S DESIGNS. WE DO PROVIDE
ADVICE IN LAYOUT AND DESIGN.
- + WE HAVE A LOT MORE TO INTRODUCE.
